"If I could rewrite the rules, I'd do it for you."

Lex

I came to L.A. with dreams bigger than me.

To learn from the best choreographers in the business and secure a professional dance gig working for Hollywood's elite.

Everything was going according to plan until I was literally shoved into the arms of the one man who could make or break my career.

Come to find out, it wasn't my career I had to worry about.

It was my heart.

Theo

Everything about Alexandra Lex Quinn screamed amateur, save for the way she moved across the dance floor.

I wanted her...on my team, in my bed.

There was only one problem...

I couldn't have both.

Center of mass - Wikipedia The experimental determination of the center of mass of a body uses gravity forces on the body and relies on the fact that in the parallel gravity field near the surface of the earth the center of mass is the same as the center of gravity. Center of Gravity - Glenn Research Center The center of gravity is a geometric property of any object. The center of gravity is the average location of the weight of an object. We can completely describe the motion of any object through space in terms of the translation of the center of gravity of the object from one place to another. Center of gravity - A basic explanation of balancing weight A simple object like a ball has its center of gravity in a very obvious place: right at its center. But in a more complex object, like your body, the center of gravity is slightly higher than your waist because there's more weight in the top half of your body than in the bottom half. Center of gravity | definition of center of gravity by ... center of gravity the midpoint or center of the weight of a body or object. In the standing adult human the center of gravity is in the midpelvic cavity, between the symphysis pubis and the umbilicus. The center of a body's mass, which is the point at which all parts are in balance with one another. The center of gravity depends on the body's.

Center of gravity | Define Center of gravity at Dictionary.com Center of gravity definition, the point through which the resultant of gravitational forces on a body passes and from which the resultant force of attraction of the body on other bodies emanates: coincident with the center of mass in a uniform gravitational field.
